

Today is the day:
Our new homepage is online and we are very happy to present our website with a new logo!

In celebration of our new homepage we also present our new products:

FDC light ARRI Adapter PL >>> LPL Mount

With this adapter ring it is possible to measure the flange distance of cameras with ARRI LPL mount with the same accuracy, well-known from the former FDC classic or FDC multi. So it is possible to use the FDC light even more effectively, because you can control the focal flange distance of the camera types ARRI LPL. The FDC classic is not available any more.

- Checking the back focus of digital video cameras with PL mount
- The flange focal distance is determined with the FDC light by projecting various gray rectangles from two different optical axes onto the camera chip
- The image is displayed on the viewfinder monitor of the camera or another monitor via the video output of the camera under test.

AVAILABLE SOON!

DENZ adapter ring for FDC light (FDC multi as well) usable for ARRI LPL.

FDC light

FDC light and Adapter for LPL Mount
